PROPERTIES OF ALFAPANS

- It is mounted instead of radiators which is located in bathroom and kitchens where central heating system is located
- It ensures heating of space like radiator
- It supplies hot water requirement by central heating system or electrical power
- ALFAPAN models with electrical heater (optional), carry out preheating in cold winter conditions and provides faster preparation of potable water.
- Sanitary and hot water is obtained with 60, 80 and 100 liter capacity without condensation and rusting.
- It does not mix the heating water within central heating installation and city water we use.
- City water is considered as 100C
- Maximum operational pressure is 6 BAR
